

Supplemental Materials

Tables

E. Benjamin Randall, Louise S. Brinth, Anna Billeschou, Jesper Mehlsen, Mette S. Olufsen

This document contains tables for the model-based analysis described in “A model-based analysis of autonomic nervous function in response to the Valsalva maneuver”. Table 1 summarizes the control subject data. Tables 2 - 4 display the individual patient data for the control subjects, including the patient number, age, sex, viable Valsalva maneuver (VM), baseline blood pressure (\bar{P}), baseline heart rate (\bar{H}), intrinsic heart rate (H_I), minimum heart rate due to respiration ($H_{R,m}$), maximal heart rate due to respiration ($H_{R,M}$), length of the VM, and average forced expiration (FE) during the VM. The clinical ratios for each data set are shown as well. Tables 5 - 7 display the optimal parameter values for parameters B , $\tau_{p,b}$, $\tau_{p,r}$, τ_s , $H_{p,b}$, $H_{p,r}$, and H_s for the control subjects. Optimized parameter values that were not identifiable, *i.e.* the parameter hit either its upper or lower bound, are indicated with asterisks. Table 8 displays the patient data for patients with autonomic dysfunction and Table 9 displays the optimized parameter values. Table 10 shows the results of the test for identifiability computed by varying the optimized parameter values by $\pm 20\%$ of their nominal value and re-optimizing to the data.

Patient	Age	Sex	# VMs	Miscellaneous	Patient	Age	Sex	# VMs	Miscellaneous
1	41	Female	4	Assumed male age 32 Assumed female age 32	19	N/A	Female	N/A	Omitted due to pregnancy
2	21	Female	5		20	43	Female	1	
3	21	Female	2		21	45	Male	3	
4	25	Female	6		22	26	Female	3	
5	N/A	N/A	5		23	28	Male	4	
6	N/A	N/A	3		24	21	Female	5	
7	29	Female	3		25	22	Female	3	
8	30	Female	4		26	21	Female	2	
9	25	Female	6		27	20	Male	4	
10	30	Male	3		28	27	Female	4	
11	27	Male	5		29	27	Male	4	
12	27	Female	3		30	58	Male	4	
13	21	Female	4		31	28	Male	3
